

Christmas Bird Count Circles documenting Rusty Blackbird (RUBL) between the 91st (1990-1991) and 109th (2008-2009) counts. Values indicate total individuals detected by count and year (not standardized by party/hour), with detections of ≥ 50 individuals bolded. Cells highlighted in blue indicate that a Circle was not yet established in a given year. Cells highlighted in yellow indicate that a Circle was established, but that a count was not conducted. 'Yrs run' reports the number of years that a Circle was active (Circle established and count conducted) during this time period. 'Yrs w/RUBL' reports the number of years during which Rusty Blackbird was documented within a Circle, and '% yrs w/RUBL' reports that number as a proportion of the number of years that the Circle was active.
